

Movenium Connector

This connector manages accounts and group memberships for Movenium

Following use cases are available out-of-the-box:

Create user: New user is created as a new hire (joiner) needs an account.

Update user: The user information is updated as the employee was promoted or changed positions within the company (mover).

Delete user: Delete user account to free up User IDs

Activate user: Activate existing account on employee return or when access is needed again.

Add to group: The account is given access to appropriate groups based on the role as the employee is a new hire (joiner) or changed positions (mover).

Remove user from group: The account's access to some or all groups are removed as employee changed positions (mover) or resigned (leaver).

Reconciliation process: Reconciliation is a process that compares two sets of records (information in Azure AD and ServiceNow IAM). This is done to check that the data on accounts, group and roles is correct and in sync.

Reconciliation is particularly useful for explaining the difference between two records. Reconciliation includes the following objects: users, groups
